

THE FORTÉ SOLUTION

EXECUTIVE MANAGEMENT AND INFORMATION SYSTEMS SUPPORT SERVICES

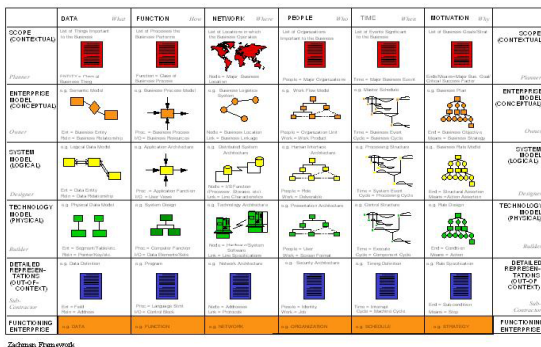

Analytical and executive management requirements are becoming more complex. Organizations struggle to keep up with decision support and reporting demands. The gap between data sources and actionable information is ever increasing. Risks associated with not being able to readily turn data into information - and information into knowledge are high.

The last things organizations need are complex and expensive software systems to manage these new operational requirements.

Our solution is a *total* solution. It is based on capturing the business and technical requirements across the enterprise, and only then implementing the information systems required to explicitly meet those requirements.

Forté provides professional, low cost and very effective analytical services and management support. We can assist all organizations in addressing their informational needs. All you need to do to begin is to consult with a Forté representative to go over your operational and strategic requirements.

ENTERPRISE ARCHITECTURE - A FRAMEWORK

What We Do

Statistical Analysis

Professional & Advanced Statistics

- statistics, significance testing
- predictive modeling, discovery and data mining
- GIS, spatial data and data visualization
- differential outcomes, survey design
- longitudinal and trend analysis
- custom tables, graphs and reports

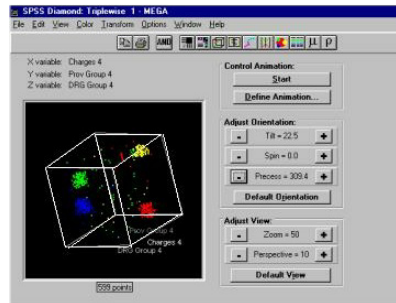

State-of-the-Art Operational Environment

- SAS, SPSS, Stata, Oracle, SQL Server

Data Mining

In addition to both quantitative and qualitative studies, numerous specialized analyses are available through Forté. We provide standard and custom reports, graphs and tables for any summary data. We also provide descriptive statistics, hypothesis testing and advanced data mining techniques including:

- discovery techniques
- predictive modeling
- visualization
- classification
- clustering
- optimization

Data Warehousing and Decision Support

We provide a *total* implementation strategy to integrate critical data from the enterprise into a meaningful information and knowledge-based architecture (based on dimensional modeling).

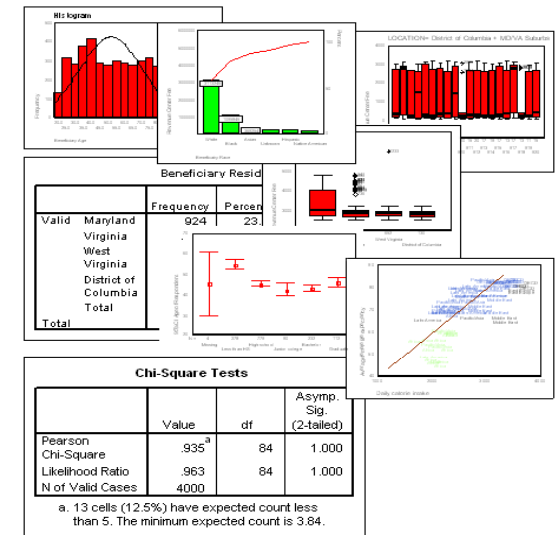

- Capture enterprise business requirements *first*
- Zachman Framework and enterprise architecture
- Dimensional modeling

Why Choose Forté
